Description

The PAC-1 antibody is derived from the fusion of SP-2 mouse myeloma cells with splenic lymphocytes from BALB/c mice that were immunized with human platelets. The PAC-1 recognizes an epitope on the glycoprotein IIb/IIIa (gpIIb/IIIa, αIIbβ3) complex of activated platelets at or near the platelet fibrinogen receptor.

Flow-cytometry

Flow-cytometry using anti-human PAC-1 antibody. Jurkat cells were stained with an irrelevant antibody (Blue Histogram) or an anti-human PAC-1 antibody monoclonal antibody (Catalog # FHC33340 ,Green Histogram) at a concentration of 5 μg/ml for 30 mins at RT. After washing, bound antibody was detected using a FITC conjugated goat anti-mouse antibody (Catalog # PMB96441) and cells analysed on a NovoCyte Flow Cytometer.
